## **BRIEF DESCRIPTION**

[The Dawn of the African Century](#) by renowned scholar Dr. Ganziro is a captivating and thought-provoking book that delves into Africa's transformative journey toward becoming a leading world economic powerhouse. Building on his previous influential book, "The Exorbitant Burden," and drawing upon meticulous research and insightful analysis, Dr. Ganziro presents compelling arguments and insights that challenge the existing economic systems and propose innovative solutions for Africa's development.

Dr. Ganziro boldly argues that Africa's over-reliance on the US dollar as a reserve currency has hindered its financial autonomy, leaving the continent susceptible to external shocks and market fluctuations. He underscores that this reliance perpetuates a cycle of vulnerability and inhibits Africa from fully asserting its economic sovereignty on the global stage.

In a groundbreaking proposition, Dr. Ganziro advocates for the adoption of a blockchain-based gold standard to establish a stable, secure, and transparent financial system for Africa to pave its way for financial independence.

By pegging its currency to gold through blockchain technology, the continent can insulate itself from the volatile fluctuations of fiat currencies and, in turn, mitigate the adverse effects of economic crises and speculative attacks.

The book presents a compelling case for embracing this new paradigm, as it promises to bolster the African economies' resilience and strengthen their financial standing in the international arena. The proposed blockchain-based gold standard would facilitate smoother trade and investment interactions between African nations and the rest of the world, encouraging a surge in both regional and global economic growth.

Dr. Ganziro further contends that a blockchain-based gold standard would ensure greater transparency and accountability in Africa's financial systems, addressing historical concerns of corruption and mismanagement. Additionally, with transactions recorded on an immutable ledger, blockchain's decentralized nature provides a more secure framework for storing and transferring value, and more trust in the financial sector, by protecting Africa's financial assets from potential cyber threats.

Implementing a blockchain-based gold standard would also facilitate Africa's integration into the global economy. By pegging its currency to gold, Africa can establish a universally recognized standard of value, increasing investor confidence and attracting foreign investment. Furthermore, this system could enable seamless cross-border transactions and trade, stimulating economic growth and cooperation within the continent and beyond.

"The Dawn of the African Century" encourages policymakers, economists, and investors to engage in a comprehensive dialogue on Africa's economic future. Dr. Ganziro's book serves as a catalyst for reimagining Africa's economic landscape, challenging conventional wisdom, and fostering innovative approaches that could pave the way for Africa's rise as a global economic powerhouse.

As readers journey through "The Dawn of the African Century," they encounter a compelling narrative that envisions a future where Africa transcends its historical economic barriers and emerges as a formidable force, steering the course of global financial interactions. Dr. Ganziro's erudition and foresight challenge conventional notions, propelling readers to contemplate the boundless potential of the African continent and its role in shaping the future of the world's economy.

## **ABOUT THE AUTHOR: DR. GANZIRO**

Dr. Ganziro is an eminent scholar and forward-thinking visionary, who has risen to eminence within the field of international economics and geopolitics due to his remarkable academic research and invaluable practical know-how.

His groundbreaking research on the correlation between the US dollar's reserve status and twin deficits has gained worldwide recognition. Through comprehensive analysis, he sheds light on the profound implications of this causality on global economic dynamics. Shockingly to the diehard strong dollar advocates, his research found that maintaining the US dollar as a global reserve currency is not in the best interests of the United States, given the significant trade deficit and debt burdens it imposes on the nation.

In his thought-provoking new book titled "The Dawn of the African Century," Dr. Ganziro disrupts conventional beliefs by asserting that Africa, rather than China, is primed to become the next World Economic Powerhouse in the 21st century. His visionary outlook stems from a deep understanding of Africa's abundant natural resources, burgeoning young population, and untapped economic opportunities. He argues that Africa should de-dollarize and move away from over-reliance on the US dollar, as it hampers its monetary & financial autonomy and exposes the continent to external shocks. He recommends a blockchain-based gold standard to establish a stable, secure, and transparent financial system for Africa.

Taking his ideas beyond academia, Dr. Ganziro founded the innovative [Raasystem](#), a groundbreaking blockchain ecosystem aimed at

transforming Africa's economic landscape. At the core of this system lies Raaskoin, a unique stablecoin backed by gold and silver, envisioned as a reliable medium of exchange in Africa. By anchoring its value to precious metals, Dr. Ganziro seeks to revolutionize the African economy by providing stability in a region historically plagued by financial volatility.

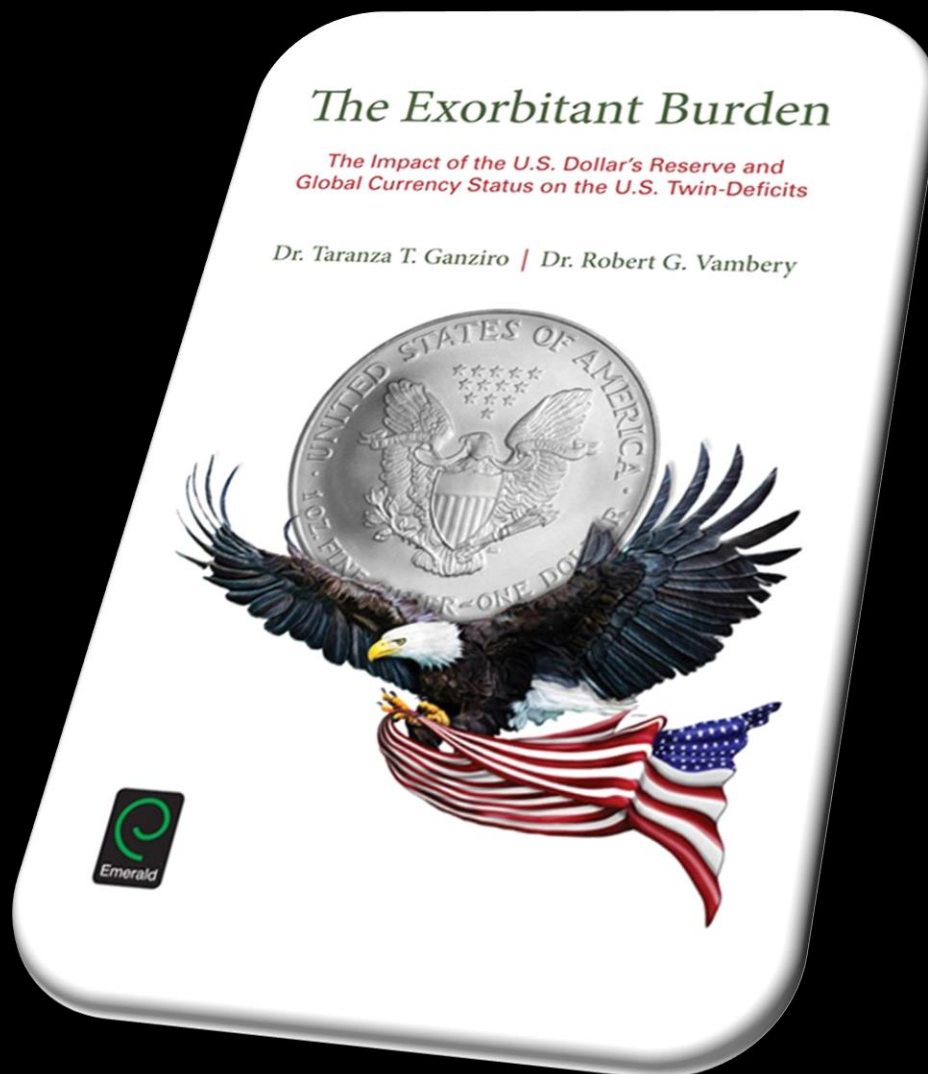

The Raasystem ecosystem enables seamless and secure transactions and acts as a catalyst for economic empowerment across the continent. It grants individuals, businesses, and governments access to transparent financial services, empowering them to actively participate in local and international transactions. Furthermore, the integration of blockchain technology ensures immutability, security, and efficiency, fostering an environment conducive to economic growth and financial inclusion.

The game-changing potential of the Raasystem is truly extraordinary, with Dr. Ganziro's innovative approach to geopolitical finance capable of reshaping economic paradigms and positioning Africa as a prominent hub for trade, investment, and technological progress. Dr. Ganziro's visionary leadership and pioneering initiatives have garnered substantial recognition for the Raasystem and its associated currency, Raaskoin, both within Africa and worldwide.

Through his relentless pursuit of knowledge, practical expertise, and dedication to Africa's economic prosperity, Dr. Ganziro has solidified his status as one of the pioneering scholars and influential figures in international economics, with a specific focus on Africa as the next World Economic Powerhouse. His research, coupled with the transformative impact of the Raasystem, has the potential to usher in a new era of economic growth, empowerment, and stability across the African continent, further establishing his legacy as a true trailblazer in the field of international economics.

## **THE SUMMITS OF SHAME**

### **Unveiling the Cycle of Empty Promises in Africa's Summit Spectacles that Lead to Nowhere**

**TO BE PUBLISHED SOON**

In the heart of Africa, amidst its lush landscapes and vibrant cultures, emerges a metaphor encapsulating the behavior of African leaders attending the continent's grandiose summits. As the Rwandese saying goes, "the Hippopotamus leaves the rivers and lakes to search for dew to quench its thirst." This saying poignantly symbolizes the cycle of empty promises and unfulfilled expectations that often define these high-profile gatherings.

Over time, Africa has witnessed an array of summits with countries from around the world, including the China-Africa Summit, US-Africa Summit, Japan-Africa Summit, Russia-Africa Summit, and more. These summits are hailed as platforms for partnership, development, and progress. However, as history unfolds, questions arise about what Africa truly expects and gains from these grand spectacles.

In a thought-provoking book titled "The Summits of Shame," Dr. Ganziro delves deep into the complex world of African summits and comprehensively assesses their impact and significance. Through a critical lens, the book sheds light on the recurring pattern of hollow promises made during these gatherings and the subsequent disappointment felt by African nations.

The book meticulously illustrates how reality often falls short of the lofty aspirations set forth in these summits. It uncovers a cycle of grandiose declarations, ambitious agendas, and eloquent speeches that are quickly forgotten or overshadowed by subsequent events.

"The Summits of Shame" highlights the lack of concrete follow-through on the commitments made at these gatherings. Despite the soaring rhetoric and apparent consensus reached during the summits, the promised reforms, developmental projects, and policy changes frequently remain unfulfilled. This cycle of empty promises perpetuates a sense of disillusionment among African nations, which bear the brunt of unmet expectations.

Furthermore, the book examines into the structural and systemic issues that underlie the ineffectiveness of African summits. It examines power dynamics, regional rivalries, and competing interests among African nations and international actors, which often undermine the collective will to implement meaningful change. The author argues that the summits will continue to be mere spectacles yielding little substantive progress unless these underlying challenges are addressed.

Africa must turn inward for its comprehensive and sustainable development, recognizing that it possesses all the necessary resources. When China embarked on its development journey, it was in a far worse position than Africa, yet it believed in its potential and succeeded. Africa, being the cradle of human civilization, should follow suit!

Perhaps there was some validity in President Trump's questioning of why Africans consistently seek opportunities abroad in Europe and America for a better life, while his acquaintances who ventured in Africa returned wealthy. It is crucial for African leaders to stop longing for external resources and instead focus on harnessing the abundant wealth and prosperity within their own nations overflowing of gold and honey.
